Description
   Using 1.10cvs from mid june 2007

   I'm using the "Admin > login > Use tracker for more user information"
   Created a simple tracker, with some fields, including the "username" field, but not the email, right
   now, since that was already introduced in the first registration screen.

   2 improvements would be needed/very welcome:

   (1) Username was not assigned to the item in the user tracker, even if the user had selected a
   username in the previous screen (first registration screen - tiki-register.php).

   (fyi: later on, When I, as a registered user, edited my item afterwards, the username info was well
   selected automatically).

   (2)
   This user info tracker (tracker id 1) had those fields:

```
Id              position      name     type     options        isMain  Multilingual
Tbl vis         Searchable    Public   Hidden   Mandatory      Description
1       edit    10     Nom     text field      1       y       n       y       y
y       n       y       Nom de la...   remove down
2       edit    20     Cognoms        text field              n       n       y
y       y       n       y       Cognoms de...   remove down
3       edit    30     Usuari  user selector   1       y       n       y       y
y       n       y       Nom...  remove down
4       edit    40     Telèfon        text field      1,50,,,50       n       n
n       y       y       n       n       Telèfon/s...   remove down
5       edit    50     Correu-e       email   1       n       n       n       y
y       n       n       Correu-e...     remove down
```

```
6       edit    60      Barri / PoblaciÃ³      textarea        1,50,10,1000,1000
n       n       n       y       y       n       y       Barri i...      remove down
7       edit    100     Foto    image   80,80,400,400,400       y       n       y
n       y       n       n       Fotografia      remove down
8       edit    200     Comentaris      textarea        1,50,10,1000,1000       n
n       y       n       y       n       n       La teva...      remove down
```

At "Admin > login > Displays UserTracker information in user information page. Format: trackerId, fieldId1, fieldId2, â€¦:", these was the field content:

1,1,2,4,6,7,8

I also tried includind field 3 - the user selector - (i.e.: 1,1,2,3,4,6,7,8), but similar effect: I couldn't see the username shown in the second screen, and It was not set on the tracker (confirmed as admin user)

Solution
> Make it in a way that user selector and email can be automatically collected and linked from the first registration screen.
> For instance: at "Admin > login > Displays UserTracker information in user information page. Format: trackerId, fieldId1, fieldId2, â€¦:", include some two params:

- the first one to allow/dissallow linking the userid field from the first registration screen (1,0) Default 1
- the second one to allow/dissallow linking the email field from the first registration screen (0,1,2)
  - 0: no
  - 1: visible by user & admin only
  - 2: visible by all, with the same setting that will be later used at "MyTiki > Preferences> Email public/private...." (to allow user to change this setting there on a later stage)
