Solution

This patch contains the following new features:

- Whole categories can be watched. Notified events are the creation, deletion and modification of a category as well as the addition/removal of an object to/from a category.
- Changes of objects that were added to a category are watched, too.
- If an object is watched by a category it is shown on the "view-page" of this object next to the standard "watch"-icon.

Why don't you join the coders at irc, and request the ability to commit your nice patch (new and very nice feature 😊) directly to cvs?

They (I'm not coder) will appreciate it even better... 😊

Thank you Guido for sharing this.

Watching categories makes it easier to use TikiWiki for a document workflow, and for wiki-based project management.

M ;-)

Hi:

I'm admin on a site which was (in theory) recently updated with 1.9.9 code, but I can't seem to watch categories... Â¿?

<http://precarios.org/categories>

However, I can, with no problems on updated 1.10 sites...

Is it really ported to 1.9cvs also? Should it be available in 1.9.9?
