### Rating

★★★★★ (2) ?

### Related-to

- ✖ Markdown support
- ● Tiki writer support for Pandoc
- ● PWA not working

### Description

The Export feature is nice, but it would be nice to export/save wiki pages with html formatting intact. A way to edit offline then sync changes would be even better, but for now, I'd settle for a way to just view pages offline.

ML: You can mail-in and watch (mail-out), but no true sync

XML-RPC? IMAP?

[http://www.socialtext.net/help-en/index.cgi?working\\_offline\\_with\\_unplugged](http://www.socialtext.net/help-en/index.cgi?working_offline_with_unplugged)

See: Offline

Would be really nice to combine with an encrypted password manager for offline storage -> User Encryption

[http://dev.tikiwiki.org/tiki-view\\_tracker\\_item.php?trackerId=5&itemId=1085&show=view&from=XMLRPC](http://dev.tikiwiki.org/tiki-view_tracker_item.php?trackerId=5&itemId=1085&show=view&from=XMLRPC)

See the attachment patch and see if that works

You could try using webhelp to export your wiki structures.

I hope for but I don't expect a full-fledge solution for 4.0. Sounds like 5.0 and beyond.

However, maybe via mail-in and watch, there would be a way to do this.

Basically, you watch all pages, so you have a copy of everything in your inbox.  
<http://doc.tikiwiki.org/Watch>

Then, you edit locally, possibly in your mail client, and use the mail-in feature to send an update to a page.  
<http://doc.tikiwiki.org/Mail-in>

When your computer becomes online again, the wiki page is updated.

Possibly, we we'll need to improve conflict detection and resolution.

You might be interested in using an updated version of TikiDavDev (right now it's not updated, unluckily, an donly worked with OpenOffice.org 1.x)

<http://tikiwiki.org/TikiDavDev>

Cheers

Marc Laporte 06 Aug 09 15:39 GMT-0000

Even a read-only version of TiddlyWiki with Tiki-exported data would be nifty.

And later on, we could look at sync.

Progress! Progressive Web App

David Bense 08 Jul 20 10:48 GMT-0000

Thank you for all your efforts!

With PWA I cannot make it work.

I do have Tiki 21.1 installed but neither in Firefox nor in Edge am I able to view the site offline.

Tiki setup:

- HTTPS enabled/mandatory
- REFURL is disabled

Browser:

- Firefox on Android: Add to Home screen ... not working
- Firefox on Win10: Simply browse url ... not working
- Edge on Win10: Url saved as App ... not working

Am I missing something??
