Description
 It appears that CGI parameters used by Galaxia activity code are getting flushed. Things are working fine in 1.8.1 but do not work in 1.9.0

I often get CGI errors like this one:

"CGI Error
The specified CGI application misbehaved by not
returning a complete set of HTTP headers."

I have earlier reported one which was related to a value in the database. (item 273). But I also experience such errors in general.

My install is in Norway. I currently live in Tanzania. A ping to my server is around 600-900 milliseconds (no fibre connection to Europe yet, but it is comming). Could this be a factor.
