Description

Hello there,

I just upgraded our TikiWiki from 1.9.11 to 2.0. I am really happy with 2.0 by the way! Way to go!

Everything went well during the upgrade, except that I get this error message every time I try to administer our categories:

http://dev.tikiwiki.org/tiki-browse_image.php?imageId=52

Everything else seems to have upgraded just fine. Yes I did follow the instructions during the tiki-install.php and run the 1.8 -> 1.9 SQL script prior to the 1.9 -> 2.0 SQL script. I noticed that there were around 150 SQL "errors" during the upgrade script, but I thought nothing of this.

Thanks a million!

Russ
