Description
Dear all,
I have a problem that at least started for version 2.0 RC4 and 2.0 final. In fact those are 3 problems, but I believe linked to the same issues

* I created a group "editors" which has more permissions than registrer.
* I gave the requested permission to the group, which "works well"

but those features does not work

List pages -> return no page
multiple print -> shows no strucuture and no page
Structure -> does not show strucuture.

For all of them the feature works if logged as admin.

I see no missing permission that sounds like related.

Any idea ?

Many thanks in advance!

Solution

Xavi (Jan. 15th, 209):
This might be a configuration issue with structures (they are not configured permissions intuitively enough, yet).
Read all the documentation about Structures (user, admin, details). The first page of the structure needs to have the right permissions for the structure.
Please, try playing with the permissions on the parent (home) page of the structure, retest, and report back.

Thanks in advanced for reporting.

Assume this issue is closed given lack of response. Please open a new ticket on a supported version if issue still exists.

I have installed the version 2.1 and the bug is still here.
