Description
New TW 4.2 installation via Simple Scripts

The Calendar shows a number of n characters and no date

I've also reproduced this in

- a manual upgrade to a working 4.1 installation
- a new installation from svn

Update:
Just tried on a new dedicated server (Ubuntu) with an installation by SVN and got exactly the same results.

If you can't wait for official release:

beetlerom 30 Apr 10 16:12 GMT-0000

You can fix this by removing all the blank spaces in templates/tiki-calendar_box.tpl .

Ed 04 May 10 15:48 GMT-0000

beetlerom - please elaborate on your proposed solution. This problem is occuring in tracker list field popups as well. I've tried removing newline and tab characters with no effect. What do you mean by "blank spaces"? Marc - I don't see a tiki 4.3 on source forge. tiki 5.0 has too many of its own issues at the moment, so I'd prefer to stay with the 4.x series for now.
