Description

It is rather difficult to write plugins that embed other plugins. The reason is the wiki syntax of the plugins not expressing if it is a beginning or an ending clause. The default is the "{X} body {X}" syntax.

Instead, {X} body {/X} should be used.

While this latter syntax as well as the {X /} are accepted by \$tikilib->parse_data, it does not process the embedded calls. E.g {X} {X /} {/X} does not work. It returns an empty body instead of {X /} or the result of {X /}.

Solution

Improve \$tikilib->parse_data.

Work-around I will try soon:

{X} {}{X /} {/X} or

{X} {UNDEFINED_PLUGIN}{X /} {/X}

none of the two suggested work-arounds do the job

Gergely 20 Apr 10 23:36 GMT-0000

The edit plugin icon is also messy to work with. Icons of embedded code should not be shown or shown only in the end of the root plugin.

Gergely 20 Apr 10 23:39 GMT-0000

and the additional to the end of the plugin is really not necessary

Gergely 20 Apr 10 23:40 GMT-0000

and the additional "" in the end of the plugin is really not necessary

The set of available parsing options seem to be limited. The (br /) is added in all the cases.

```
$parsing_options'stripplugins' = 'y';  
$parsing_options'suppress_icons' = 'y';  
$parsing_options'print' = 'y';
```

"".\$mystring."" also lets (br /) through

Gergely 22 Apr 10 20:02 GMT-0000

Related: the box in box is not supported, ie.

```
a  
b  
c  
puts boxes around 'a' and 'c' and there is no way to put a box around 'abc' and another around 'b'.
```
