Description
When a wiki page displays flash content through the flash wikiplugin, phplayers menus will appear under the flash content. This will happen even if the z-index property is properly set, because Flash renders on top of all DHTML layers.

Solution
As described here: www.macromedia.com/cfusion/knowledgebase/index.cfm?id=tn_14201 the background of the flash movie has to be set to transparent.
The following changes have to be made to /lib/wiki-plugins/wikiplugin_flash.php:

- add PARAM name="wmode" value="transparent" to the OBJECT tag.
- add wmode="transparent" to the EMBED tag.

One could also add a parameter to the wikiplugin to set transparency on/off.

I have used this also.

fmathias 26 Jan 06 14:25 GMT-0000

haven't tested if the fix works.... but marc says it does! :P
