Description
    Using BRANCH-1-9:
    in an assigned module causes WSOD.

    according to luciash in chat:

    this "seems conflict between plugin and wiki syntax to me, because recently the syntax was made
    more universal and plugins can be called using lowercase {pluginname} syntax too"

Solution
    Deleting lib/wikiplugins/wikiplugin_rcontent.php fixes WSOD, rcontent syntax then pulls random
    content correctly (tho apparently not using correctly parsing text formatting unless using
    {wiki}BRANCH-1-9:
    {/wiki}).

    I don't understand what function the rcontent plugin serves (vs. the wikisyntax), so perhaps deleting
    this plugin causes other problems?
